

I just heard about NAB petition, and I think it is wrong! I drive for a living and regular radio stations fade in and out too much. XM radio lets me listen to what I want with clear reception, and that is important. I think that if I want to pay for the benefits of having something like XM. Then it's my choice if I want to pay for it. Not some big business. Who sees it as cutting in to their already huge profits. IF this ruling goes thru it would be just another example of taking away our rights to choose. This petition should be thrown out, and not be given any consideration at all. After all we have satellite tv. Did we get rid of that just so the local channels would be watched. No we didn't. This is the future give the people what they want. XM RADIO!!!
